

Alaska 2022 Election Demand to Strike "Rank Choice Voting"

The State of Alaska must take formal Judicial Notice of the authenticity of Exhibits 1 and 2 attached herein

A multi-tiered Alaska State Department, intrastate and international conspiracy currently exists between Alaska Division of Elections employees, Alaska Department of Administration employees and elected officials, former Alaskan elected officials, private individuals, and corporate entities to facilitate organized crime and racketeering by subverting Alaskan citizen's most fundamental right to legitimately vote for government officials and leaders of the State in a fair, free and just election. The scope is broad, pervasive and extensive and is supported by the State's own database evidence which exhibits 100% manipulation of the Alaskan vote in the 2020 General election.

State of Alaska et al. v. Arctic Village Council et al., 7556, P.3d 14 (Alaska 2021): In addressing the substance of the State's constitutional argument, we like the superior court - use our established four-step analysis for assessing an election law's constitutionality under the Alaska Constitution. "We start with the bedrock principle that 'the right of the citizens to cast their ballots and thus participate in the selection of those who control their government is one of the fundamental prerogatives of citizenship': Miller v. Treadwell, 245 P.3d, 868 (Alaska 2010) (quoting Carr v. Thomas, 586 P.2d 622, 626 (Alaska 1978), also Dansereau v. Ulmer, 903 P.2d 555, 559 (Alaska 1995) (observing that the right to vote is "fundamental to our concept of democratic government"). The right to vote "encompasses the voter's right to express the voter's opinion and is a way to declare the voter's full membership in the political community." Id. (alterations omitted) (quoting Dansereau 903 P.2d at 559). Quoting former State and Federal prosecutor and United States Supreme Court reviewer Wevley W. Shea: "A voter cannot have full membership when fraud exists." And Nudd v. Burrows (1875) 91 U.S. 416, "Fraud vitiates everything it touches."

See Exhibit 1, 84 pages: 2020 State of Alaska database election data findings, votes cast counts, differences and District 02 Question Ballot data analysis. See Exhibit 2, 10 pages: 2020 State of Alaska Ballot Measure 2 (BM2) ("rank choice voting") data (including ballot date and time stamped vote tally data extrapolation from the Alaska Division of Elections (DOE) website), which displays how BM2 was defeated. Beginning after the final vote count on November 4, 2020 where 100% tally was reported and recorded by DOE in 441 of 441 precincts (includes early voting), the totals were 105,161 (NO) to 81,048 (YES). Then beginning six days after the count, 158,094 *witness-less* votes were counted by DOE every few days, until BM2 reportedly won on November 30, 2020 by less than 1%.

The intentional acts memorialized herein, display the egregious demonstration by the State to not defend Alaskan citizens. These acts reach to the highest definition of fraud: State of Alaska et al. v. Arctic Village Council et al., 7556, P.3d 14 (Alaska 2021), footnote 18: We note that the superior court decided the motion for preliminary injunction by reference to state law only, and the State did not argue in its petition for review that the court's enforcement of voting rights under the Alaska Constitution, was limited by the United States Constitution or other federal law.

Alaska needs an applicable agency, entity or authority to intervene on behalf of the Alaskan People and stop the illegal Rank Choice voting in Alaska.

2020 Alaska Election Data – Initial Findings

Troy W. Swanson and Mike Armour

January 2, 2021

Abstract

An analysis has been conducted of the recent 2020 Alaska Election Data for votes cast November 3, 2020 as published by the State of Alaska Division of Elections. While our work does not prove any misfeasance on the part of the Alaska Division of Elections, it certainly raises questions as to the validity of the data used to certify the State of Alaska's 2020 election results. We have found through this analysis what can be described as a systematic error in accounting for unreconciled votes cast ("times counted") across many State of Alaska voting Districts and Precincts. While this error could be attributed to significant anomalies in votes cast, there are very likely cases of systematic manipulation of the election data and votes cast. Due to the precision of the disparity it is much more likely some combination of voter fraud, use of fractional data to represent whole integers by the Dominion Voting System Software, or other votes cast manipulation within Dominion Voting Systems software.

Because this analysis was done using the summary data published by the State of Alaska Division of Elections after the election, we are somewhat limited in the scope and detail of our conclusions; we have conducted our analysis on this summary data. Access to the actual votes cast both in electronic record and paper/image copy would provide further opportunities to determine the true nature of this disparity and apart fraud in the 2020 Alaska Election.

Data Methods

Data Definitions and Color Coding

Definitions

Subtotal – Used to describe the sum of the votes cast for and/or against a particular ballot measure or an office. Typically the sum of "yes" and "no" votes case for a Ballot Measure, or the sum of the votes cast for all candidates for a specific office.

Tally – The number of total votes case as indicated by the State of Alaska Division of Elections and attributed/described as "times cast". These are defined as total votes cast and received at the Districts/Precincts, a subset of which are recorded as accepted votes and the remainder being not accepted for unspecified reasons. Those accepted are recorded as votes cast for each ballot measure or office, and sum to the indicated "Subtotal" herein.

Times Cast – The same number value as the "Tally".

Tally % - The ratio of the "Tally" to the "Subtotal" expressed as a percentage.

Color Coding

For the following color coding, Excel can be used to filter to these coding by using the Filter option for the indicated columns. This will provide for quick analysis of the District/Precinct rows of interest. In the whole of the report, these can be visually used to find the Districts/Precincts with the difference/disparities found between the "Subtotal" and "Tally" as well as the percentage difference.

Column A (ID) – Light Green: Those rows for Districts/Precincts for Ballot Measure 2 with a Tally that is greater than 5% through 25% larger than its Subtotal.

There are 173 rows that meet this metric.

Column A (ID) – Darker Green: Those rows for Districts/Precincts for Ballot Measure 2 with a Tally that is greater than 5% through 25% larger than its Subtotal.

There are 24 rows that meet this metric.

Column B (District) –Yellow: Those rows for Districts/Precincts with at least one ballot measure or office Tally that is greater than 25% larger than its Subtotal.

There are 16 rows that meet this metric.

Column B (District) –Red: Those rows for Districts/Precincts with at least one ballot measure or office Tally that is greater than 150% larger than its Subtotal.

There are 10 rows that meet this metric.

Overall table grid colors:

- Gold columns: Indicate values for Ballot Measure 1
- Green columns: Indicate values for Ballot Measure 2
- Gray columns: Indicate values for the office of President and Vice President
- Dark Blue columns: Indicate values for the office of U.S. Representative
- Orange columns: Indicate values for the office of U.S. Senator
- Light Blue columns: Indicate values for a primary Democrat candidate ticket
- Light Red columns: indicate values for a primary Republican candidate ticket

Data Analysis

The initial analysis of the 2020 Alaska election data provided by the Division of Elections was conducted on the 66,627 summary records of votes cast for all voting Districts/Precincts in the State of Alaska. This data was then transformed using an Excel pivot table to present that data for analysis with the District/Precinct represented by row and ballot measure/candidates as columns. In this form, it is easier to inspect and analysis the summary of votes cast by each District/Precinct for any of the individual ballot entries or collection thereof. In addition, this form provides for the sum of votes and comparison by difference and percentage of that “subtotal” against “times counted” votes cast.

Findings

Overall, the data indicates that while the top of the ticket, the election of the President and Vice President is consistently found to have Subtotal of votes cast that are near the Tally of votes (“time cast”). This represents a precision that far exceeds the expected randomness in voting. For example, a voter may choose to vote for only the Presidential ticket and no other ballot item, and yet another voter may choose to vote for Ballot Measures and/or U.S. Representative or Senator. This individual choice should be presented as disparity in differences and percentages between ballot items. To the contrary, many Districts/Precincts have far too precise of differences between the top of the ballot and those ballot items further down the ballot.

In some Districts/Precincts it is likely significant errors have occurred that contribute to some of the statistical differences. An example of this can be found on Row ID 22 for the District 2 Questioned ballots. It would appear 649 votes were cast ("times casted"). 646 those were recorded for the Presidential ticket. Yet only 233, 215, 232, and 242 votes were cast for Ballot Measure 1, Ballot Measure 2, U.S. Representative, and U.S. Senator respectively. Normal random behavior associated with individual choice should produce numbers that are not as consistent as this. There are many plausible reasons for these numbers that only a true forensic analysis of the paper ballots involved would reveal. These may include but not be limited to; injection of fraudulent top ticket ballots, manual or automated manipulated results by the hardware/software in use (Dominion Voting System in some cases), and purposeful duplicate scanning/input of legitimate top ticket ballots. These scenarios and more would be revealed through a forensic analysis of the paper ballots to that of the electronic records.

It should be noted that an ancillary review and inspection of the remainder of down ballot items for this election reveals the same trend across the entirety of the ballots for the Districts/Precincts.

Summary and Statements relevant to our detailed analysis of the data

The following summarizes the findings into statements regarding our analysis of the 2020 Alaska election data:

- The State of Alaska election data for votes cast in the 2020 General election indicates that there are 595,647 registered voters in the state and a total of 361,394 votes cast in the presidential race.
- Further inspection of the data provided by the state for the 441 precincts in Alaska indicates that only 357,566 cast votes were recorded when counted precinct by precinct.
- The 361,294 is a total tally of the votes cast as "times counted" is 1.07% greater than the calculated 357,566 votes cast and recorded precinct by precinct.
- A closer inspection of the voter data for all 441 precincts, demonstrated almost every precinct has a total cast voter count record by the state that is higher than attributed to the actual recorded votes cast for nearly every race and ballot item.
- The 2020 Alaska General Election data includes a general and widespread larger number of "times counted" for cast votes that exceed the cast votes actually recorded for the precincts.
- Specifically, the votes cast for the Presidential race at the top of the ballot, have consistent differences in votes cast for other down ballot measures in a consistent pattern that is far too precise given the expected randomness of individual choice.

Proposed Remedy

Remedy 1

We would first propose the Alaska Division of Election conduct a purposeful forensic audit of the Ballot Measure 2 votes cast in person to include the veracity of the absentee, early, and questioned ballots. The uncounted approx. 16,000 votes cast as questioned ballots in particular looks to exceed by four times the current difference of approx. 3,800 in Ballot Measure 2.

Remedy 2

An forensic analysis of certain Districts/Precincts be conducted to evaluate the integrity of the overall system of voting. This effort should focus on those Districts/Precincts with largest number of discrepancies and include a physical inspection of the paper ballot cast and the overall electronic record, recorded votes, and votes cast ("times counted"). There should be significant effort expended to evaluate the integrity of the Dominion Voting System and its role during this investigation.

Remedy 3

Regardless of the results of your forensic audit and in light of the multiple lawsuits and allegations of wrongdoing associated with Dominion Voting Systems in so many states across this nation, we respectfully ask that you move to immediately decertify the Dominion Voting Systems for use in the State of Alaska.

Additional Recommendations

It is further recommended that the election data that includes the individual votes cast be analyzed to ensure the veracity of each and its contribution to the overalls sum of votes. In addition, due to the large difference in some cases of votes cast ("times counted") that were not recorded, these should be further inspected to ensure they have not been improperly adjudicated.

Conclusion

In general, further detailed and forensic analysis is highly recommended, as the summary data consistently demonstrates a potential lack of integrity and resulting distrust in the election data and/or process. It is therefore proposed that the State of Alaska citizens, without necessary petition or class action as cause, require action to restore the integrity and trust of the overall Alaskan election system. This action and pursuit of the proposed Remedies must be taken by the Division of Election and/or required of it by the State of Alaska legislative congress.

Regards,

Michael Armour

Troy W. Swanson

Summary of Alaska Election Data

Total Votes Cast Differences

Subtotal = Votes cast actually counted for Measure or Candidate

Vote Tally = Total votes cast, the difference being this "Tally" less the "Subtotal" = those not counted

NOTE: Those not counted for BM2 is greater than the winning margin
